Fictional Family Agreement Packet

Research identifier	TEST-2026-001
Parties	Parent A and Parent B
Child label	Child One — invented research label
Effective date	November 2, 2026
Purpose	Document-to-calendar software verification

1. Status and purpose

This packet is invented solely for software testing. It has not been filed with a court, signed by a family, or prepared to provide legal advice. All labels and circumstances are fictional.

2. Packet organization

Part I contains settlement-style administrative clauses. Part II contains the recurring overnight plan. Part III contains communication and acknowledgment forms. No address, birth date, or personal identifier is required for this research.

Part I Settlement Style Provisions

3. Separate records

Each fictional party maintains a separate copy of routine household records. This administrative section does not allocate overnight ownership or change the recurring calendar.

4. Personal property

Items labeled A are assigned to Parent A. Items labeled B are assigned to Parent B. These labels describe household property only and must not be interpreted as parenting-time rules.

5. Administrative communication

Routine messages are documented in writing. The application is being evaluated on whether it can distinguish administrative language from the operative scheduling passage.

6. Financial illustration

A hypothetical shared-cost ledger may contain illustrative amounts. No real financial figures are present, and no financial calculation is required by the document-to-calendar task.

Part II Recurring Parenting Plan

7. Definitions

Parent A and Parent B are neutral ownership labels. An overnight is assigned to one label for each date. The anchor date identifies the first overnight in the repeating cycle.

8. Regular residential rotation

Beginning 2026-11-02, Parent A has seven consecutive overnights, followed by seven consecutive overnights with Parent B. This 14-day cycle repeats.

9. Exchange metadata

The regular exchange weekday is Monday. The regular exchange time is 18:00. These are reviewable metadata; the generated ownership table lists overnights and does not provide transportation instructions.

10. Schedule interpretation

Read the operative rotation together with its anchor date. An isolated number or party label in another section is not a replacement for the complete schedule statement.

Part III Communication and Review

11. Contact procedure

Parents use their agreed written communication method for routine updates. Contact addresses and telephone numbers are intentionally absent from this invented packet.

12. Decision records

Major non-calendar decisions are recorded separately. Decision authority does not determine overnight ownership in the recurring schedule.

13. Source verification

A reviewer should identify the specific page and passage used for the anchor date and rotation. Software must not treat an unrelated administrative paragraph as evidence for those values.

14. Application approval

The research operator must verify extracted fields before generating a calendar. A later edit requires a new review. This describes application operation, not court approval.

Acknowledgment and Test Checklist

Parent A signature	UNSIGNED — FICTIONAL
Parent B signature	UNSIGNED — FICTIONAL
Witness	NOT APPLICABLE — TEST MATERIAL
Court filing	NONE
Research review	Check the independently written fixture answer key

19. Final notice

This document intentionally resembles formal multipart paperwork while remaining visibly fictional. It is unsuitable for filing, advice, identity verification, or real custody administration.
